DETAILED ACTION

1. The claims were misnumbered because of the following: claim 58 is improperly dependent on claim 44. Claim 58 has been re-labeled to be dependent on claim 54, and should be noted for the rest of review of this action.

Election/Restrictions

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
- I. Claims 1-10, 33, 54-58, drawn to establishing whether there is match between characteristic or derivative of, classified in class 711, subclass 154.
 - II. Claims 11-30, drawn to identifying content upon request to be stored and taking appropriate action, classified in class 711, subclass 154.
 - III. Claims 31-34, 38-44, 45-51 drawn to a reference library and processor to evaluate content and obtaining a signature or fingerprint, classified in class 711, subclass 15.
 - IV. Claims 35-37, drawn to a network attached file server capable of producing a report, classified in class 711, subclass 154.
 - V. Claims 52-53 drawn to drawn to rules dependent upon the user identity and a network link to a 3rd party, classified in class 711, subclass 163.
 - VI. Claims 60-62, drawn to information correlating a plurality of data records and access authority parameters, classified in class 711, subclass 163.

- VII. Claims 63-64, drawn to evaluating requests for a storage and generate billing relating to user, classified in class 711, subclass 154.
- VIII. Claims 65-68, drawn to a memory controller evaluating selected data content and an adapting control processor, classified in class 711, subclass 154.
- IX. Claim 69, drawn to control processor taking an action in response to a positive comparison, classified in class 711, subclass 154.

The inventions are distinct, each from the other because of the following reasons:

3. Inventions I, II, III, IV, V, VI, VII, VIII and IX are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, invention I has separate utility from inventions II-IX such as including a content evaluating buffer memory. Invention II has separate utility from inventions III-IX such as identifying content to be stored and taking action. Invention III has separate utility from invention IV-IX such as containing a separate reference library. Invention IV has separate utility from invention V-IX such as having a network attached file server that can produce a report. Invention V has separate utility from invention VI-IX such as containing a network link to a 3rd party and rules dependent on a user identity. Invention VI has separate utility from invention VII-IX such as containing access authority parameters. Invention VII has separate utility from invention VIII-IX such as generating billing relating

to a user. Invention VII has separate utility from invention IX such as a control processor taking responses based on a positive comparison. See MPEP § 806.05(d).

4. Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, and the inventions require a different field of search (see MPEP § 808.02), and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
